Pre-Anesthesia Consent

I am the owner/authorized agent of the pet identified to the left. I am 18 years of age or older, and I have the authority to give this authorization and do so voluntarily, having been advised of all the probable and material risks associated with this treatment. I am aware that there are risks involved in the administration of any anesthesia and with all procedures, including death. If an unforeseen condition or emergency arises during the course of my pet's treatment, I further authorize the doctor to perform any additional procedures, which, in their judgement, may be immediately necessary to my pet's life & health.

**I UNDERSTAND THAT FULL PAYMENT IS DUE WHEN MY PET IS PICKED UP.**

Pre-Anesthetic Labwork

A mini-screen blood profile is REQUIRED for patients 7 years or older, as well as for dental procedures, major surgery, and our best practice spay's/neuters. It is STRONGLY RECOMMENDED for every patient undergoing anesthesia to ensure no underlying internal problems that may not be physically evident, but that could lead to complications.

_____ Yes, please complete the recommended/required lab work prior to anesthesia

Initial

_____ No, I decline the recommended labwork & take full responsibility for any complications due to an underlying illness that would have been seen with labwork.

Initial

Intravenous Access & Fluid Support

An Intravenous (IV) catheter & fluids are very important to allow immediate access in case of emergency and to provide blood pressure support. IV fluids are especially important under general anesthesia & are REQUIRED for dental procedures, major surgery, and our best practice spay's/neuters.

_____ Yes, Please use an IV catheter & fluids

Initial

_____ No, do not use an IV catheter & fluids (unless required). I understand the risks & realize that IF needed at anytime during anesthesia for the safety of the pet, I am responsible for the additional payment.
