

## Are you suffering from Scar Tissue Adhesions?

---

Scar Tissue forms in the body as a temporary patching mechanism for wounds caused by surgery, trauma or repetitive stress. Scar tissue connecting tissue not normally connected are called adhesions. Adhesions can spread, entrapping nerves, causing pain or numbness and limiting range of motion. Un-diagnosed pain and restricted mobility are likely to be caused by these scar tissue adhesions.

## What can you do about it?

---

Scar Tissue Therapy™ is focused on relief of soft tissue problems caused by adhesions such as:

- ***Carpal Tunnel Syndrome***
- ***Tendonosis***
- ***Muscle Spasms***
- ***Trapped Nerves***
- ***Range of Motion***
- ***Contractures, Neuromas, back, shoulder and ankle pain***
- ***Headaches, TMJ***
- ***Knee problems, tennis elbow***

Scar Tissue Therapy™ targets brittle scar tissue with the shearing force of planar wave energy that passes safely through soft tissue but is readily absorbed by scar tissue. RRT has determined the optimum frequency that resonates with the scar tissue for maximum effectiveness. With only a 2mm stroke, this therapy feels good and is completely safe.
